

- `console.log()` → To write / print a message on console

Linking a JS file

```
<script src = "app.js" ></script>
```

- This is usually added at the bottom end of `<body>` in HTML file
- Not necessary, but recommended.

template Literals

`$ { }`

- Used to add embedded expressions in a string.

Ex :- `let a = 5;`

`let b = 10;`

`// console.log("Price is ", (a+b), " rupees");`

`console.log(`Your pay $ { a+b } rupees`);`

Comparison Operators

==

- Compares values, not data types

5 == '5'

true

0 == ''

true

0 == false

true

null == undefined

true

===

- Compares both values and data types

5 === '5'

false

0 === ''

false

0 === false

false

null === undefined

false

Note :

'a' > 'A'

true

'a' > 'b'

false

'a' → 61

'b' → 62

'A' → 41

'B' → 42

} based
on unicones

Truthy & Falsy

- Everything in JS is true or false (in boolean context)
- doesn't mean their value itself is true or false

Falsy values → false, 0, -0, 0n (BigInt value), "" (empty strings), null, undefined, NaN

Truthy values → Everything else
