

this Keyword

"this" keyword refers to an object that is executing the current piece of code

→ Parameters of an object cannot be used directly so .this is used.

```
const students = {  
  name: "Ishuvi",  
  age: 21,  
  eng: 99,  
  math: 100,  
  phy: 98,  
  get Avg() {  
    let avg = (this.eng + this.math + this.phy) / 3;  
    console.log(avg);  
  }  
}
```

can't directly access without this keyword

try and catch

- try allows to define a block of code to be tested for errors while it is being executed.
- Catch allows to define a block of code to be executed, if an error occurs in the try block.

```
try {  
  console.log(a);  
} catch {  
  console.log('variable a doesn't exist');  
}
```

Miscellaneous topics

Arrow functions

```
const sum = (a, b) => {  
  return a + b;  
};
```

Implicit return format: `const sum = (a, b) => (`
`a + b;`
`);`

closed brackets
instead of curly braces

automatically
returned

Set timeout Function

→ Inbuilt function of Window object

`setTimeout (function, timeout)`

callback time
 in ms

```
console.log("Hi there!");
```

```
setTimeout ( () => {  
    console.log("Apna college");  
}, 4000 );
```

→ No arguments

```
console.log("Welcome to");
```

O/p: Hi there!
 Welcome to
 Apna college

Set Interval Function

- Executes continuously in fixed intervals.

```
let id = setInterval ( () => {  
    console.log("Apna college");  
}, 4000 );
```

→ In 4 sec, Apna college is printed
and again in 4 sec and again...

o to stop the generation : `clearInterval(id)` ;

this with Arrow Functions

Arrow

1) Lexical scope

↙
parent's scope is
inherited

Function

1) Scope depends upon calling
object.
